# *How to select the right perfume?*

Magic of lasting fragrance Personal opinion plays the most important role. Each person has different tastes after all, different emotion. Due to skin type, method of nutrition and life habits, each person has their own personal scent.

The use of samples of fragrance is ideal for the perfect selection of the right perfume. Essential ingredients are released gradually for several hours, so it is possible to test the individual aroma at rest, and choose the best one, created just for you.

It is clear that each situation requires a different type of scent, with varying intensity. We choose to the school or to the work a lighter scent that does not irritate the area; on the contrary, it is offered to choose heavier and disarming perfume, to the evening events.

# Magic of lasting fragrance

There are some simple tricks to achieve maximum effect. Perfume works best where the skin is mostly perfused with blood. It is, therefore, applied in small quantities to the ears, wrist, elbow, but also to the ankles. It is good, first let absorb the scent through the skin, and then get dressed. For more intense impression, it is possible to apply perfume on freshly washed hair, where it holds very well. Conversely, for the lower intensity, it is sufficient to enter into the fragrant cloud created using sprayed perfume in front of you.

We must not forget that the resulting smell is our reputation; it affects our behaviour, and our surroundings, and has also been implicated in establishing new relationships.

# Welcome to the world of fragrances!

Dear friends,

We would like to introduce you our catalogue, which includes a complete range of perfume products ESSENS.

ESSENS perfumes are made with a strong emphasis on quality.

The supplier is certified GMP (Good Manufacturing Practice) and ISO 9001-2008 certificates. Perfumes contain 20% aromatic essences, which ensure that they are among the elite of the perfumes. Let us mention at least a simplified manufacturing process. The best aromatic essences are first mixed with a special perfume alcohol; the mixture is super-cooled to a temperature of -7 °C and perfectly filtered; filters of fineness of 10 microns are used for filtration. Perfume then further ripens at least eight weeks in stainless steel tanks, so that all components are perfectly able to join together. This sufficiently long maturation period allows creating a harmonious whole with intense and dazzling fragrance. The ripe perfume is then filled into flacons, cleaned by air stream created by Italian masters at the renowned glass workshop, and then packed in gift packing. All production steps are subject to the strictest guality control, and only faultless materials are used for production. Individual fragrances are manufactured according to secret recipes, which are protected by patents.

We believe that you really love our products of perfume series.

lvana Kovářová Štěpánová ESSENS management

# Women's perfumes

#### AROMATIC ESSENCE SHARE 20%

#### W 101 | 🗘
