LET'S IMAGINE THE MOST SIMPLE EXPLANATION OF THE PRODUCTION PROCESS

Essences of the highest quality, comprised predominantly of natural sources, are first mixed with pure perfume alcohol. To denaturate this alcohol, only distilled water is used so that the fragrance and the quality of the final product is not at all influenced. The resulting mixture is supercooled to a temperature of -7°C and perfectly filtered. A filter of 10 microns is used for this process. For the components to be able to bind into a harmonic unit, the perfume matures for at least 8 weeks in stainless steel storage tanks. It is then filled into flacons that are cleaned by air stream and created by Italian masters in a well known workshop. Finally, it is packed into a box designed with the emphasis of purity. All production steps are under constant control of quality and only faultless materials are used for the production.
